Knowledge is POWER

We believe in the Laws of Nature

As revealed through:
Science, History, Logic, and Common Sense

1. **What is Nature? The broad answer is not too difficult. Simply, Nature is the whole cosmos, the total universe, including its millions of natural laws through space and time.**
2. **The universe is governed by the laws of Nature.**
3. **The laws of Nature are fixed, immutable, and eternal, not subject to modification or interdiction by any god.**
4. **The laws of Nature apply to living creatures just as firmly and relentlessly as they do to inanimate objects.**
5. **The human races, too, are creatures of Nature, and subject to the laws of nature.**
6. **Nature is interested only in the survival of the species, and not the individual. Genetic survival in the endless succession of the new generations of our race is the only form of eternity.**
7. **Only those species survive that can complete in the hostile face of all others, and either hold their own or increase.**
8. **Nature continually tries to upgrade the species by the law of the survival of the Fittest. It ruthlessly culls out, generally before reproduction, all the misfits, the sickly and the weak.**
9. **Through its laws Nature shows that in the struggle for the survival the species must be completely "beyond good and evil": devoid of any compassion, knee-jerking morality, or sense of fair play, as far as any other species is concerned. The only yardstick is survival. The end (genetic survival) justifies the means, any and all means deemed effective and necessary.**
10. **Nature favors and promotes the inner segregation of each species and causes the sub-species to compete against each other.**
11. **Nature frowns upon mongrelization, cross-breeding or miscegenation. Nature has given not only each species, but each sub-species the instinctive drive to mate only with its own kind.**
12. **Nature has evolved for each particular species a particular pattern in its life cycle which that species must follow. This is called instinct, a very important and vital part of its makeup. Any deviation, deadening or dulling of its instincts, as a rule, results in the extinction of that particular species. The White Race should note this well.**
13. **Nature is completely impartial as to which species survives, each being on its own, in the hostile competition against all others.**
14. **Nature tells each species to be completely indifferent to the survival of any other species, and relentlessly strive to expand and multiply to the limit of its ability. Love and tenderness are reserved exclusively to its own kind.**
15. **The leadership principle is instinctively ingrained and utilized by many species of animals, birds, and insects as well as the human races. It must be the foundation of all social organizations.**
16. **One species, for example a flock of gulls, will sometimes wage wholesale war against another species, such as a plague of locusts. A pack of wolves will attack a herd of musk oxen. However, fratricidal wars among the species against its own kind are unknown in nature, except for some misguided human species, except for some misguided human species, especially the fratricidal Whites.**
17. **Nowhere in the realm of nature does a stronger, superior species hold back its own advancement and expansion in deference to weaker, inferior species. There is no compassion between one species and another, only life and death competition.**
18. **Species themselves are continuously changing and evolving over the millenniums of time. This can even be greatly sped up by means of deliberate selection, as in the breeding of horses. Species die out. New species evolve. None remain static, but all, including the human species, are forever changing. However, a change does not automatically mean that it is for the better: <u>only strict application of the principles of eugenics can insure that the changes are for the better and not for the worse.</u>**
19. **Nature has given each creature a strong natural instinct whose basic drive is <u>the perpetuation of its own kind.</u> Ingrained in this instinct is a complete blueprint for its whole life pattern that will propagate its own kind, generation after generation. A species must follow its ingrained instinctive pattern or perish.**
20. **Nature clearly indicates that it is her plan that each species continuously improve and up-grade itself, or be ruthlessly phased out of existence. <u>Eternal struggle is the price of survival.</u>**

The Laws Of Nature Are Supreme
